True wireless stereo, *designed in Britain,* for the rooms people actually live in.

Who we are

Mitchell Acoustics is a premium audio brand designed in Britain, founded in 2019. We make true wireless stereo speakers: a real left and a real right, with no cable between them and no receiver, amplifier or app in the way. The range runs from the compact uStream Cube to the three-way uStream Three, plus the uStream TT1 turntable and the uStream Groove System. Products are sold through consumer electronics retailers and smart-home installers, established in the UK and the USA and expanding globally.

Designed in Britain

Every driver placement, crossover curve and cabinet dimension is designed and tuned by our engineers in Britain, and voiced for real rooms rather than a lab. Manufacturing in China gives us access to the best speaker component supply chains without inflating the price. We are open about that, because the engineering, the quality control and the sound are ours.

Stereo, not a soundbar

Music, film and television are produced in stereo, and most homes now hear them through a single box under the screen. Our position is that the soundbar is a compromise the industry sold as a solution. Two separate speakers, placed where stereo wants them, give a width and depth that a one-box system has to simulate with processing. Every uStream speaker is the soundbar replacement: it connects to the television over HDMI ARC or optical and is controlled by the remote already on the sofa.

The founder

Paul Mitchell, Founder and Creative Director, is a British audio specialist, professional musician, composer and producer with a career built across retail and consumer electronics. The idea for Mitchell Acoustics came from a simple observation: everything is made in stereo, and almost nobody hears it that way any more. He wanted to fix that with something genuinely accessible that refused to compromise on sound.
